

Technical Information

Proline Promag 10W

Electromagnetic flowmeter

Sensor with degree of protection IP68 (Type 6P enclosure) with a highly cost-effective transmitter

Application

- The bidirectionally measuring principle is virtually independent of pressure, density, temperature and viscosity
- The specialist in the water and wastewater industry for the most demanding applications

Device properties

- International drinking water approvals
- Degree of protection IP68 (Type 6P enclosure)
- 2-line display with push buttons
- Device in compact or remote version
- HART

Your benefits

- Secure, reliable long-term operation – robust and completely welded sensor
- Energy-saving flow measurement – no pressure loss due to cross-section constriction
- Maintenance-free – no moving parts
- Cost-effective – designed for easy applications and direct integration
- Safe operation – display provides easy readable process information
- Fully industry compliant – IEC/EN/NAMUR

Function and system design

Measuring principle

Following *Faraday's law of magnetic induction*, a voltage is induced in a conductor moving through a magnetic field.

In the electromagnetic measuring principle, the flowing medium is the moving conductor. The voltage induced is proportional to the flow velocity and is supplied to the amplifier by means of two measuring electrodes. The flow volume is calculated by means of the pipe cross-sectional area. The DC magnetic field is created through a switched direct current of alternating polarity.

$$U_e = B \cdot L \cdot v$$

$$Q = A \cdot v$$

U_e	Induced voltage
B	Magnetic induction (magnetic field)
L	Electrode spacing
v	Flow velocity
Q	Volume flow
A	Pipe cross-section
I	Current strength

Measuring system

The measuring system consists of a transmitter and a sensor.

Two versions are available:

- Compact version: Transmitter and sensor form a mechanical unit.
- Remote version: Sensor is mounted separate from the transmitter.

Transmitter:

- Promag 10 (key operation, two-line, unilluminated display)

Sensor:

- Promag W, DN 25 to 2000 (1 to 78")

Input

Measured variable Flow velocity (proportional to induced voltage)

Measuring ranges Typically $v = 0.01$ to 10 m/s (0.033 to 33 ft/s) with the specified accuracy

Standard version

Flow characteristic values (SI units)					
Diameter		Recommended flow Min./max. full scale value ($v \sim 0.3$ or 10 m/s)	Factory settings

Operable flow range

Over 1000 : 1

Output

Output signal**Current output**

- Galvanically isolated
- Active: 4 to 20 mA, $R_L < 700 \Omega$ (for HART: $R_L \geq 250 \Omega$)
- Full scale value adjustable
- Temperature coefficient: typ. $2 \mu\text{A}/^\circ\text{C}$, resolution: $1.5 \mu\text{A}$

Pulse/status output

- Galvanically isolated
 - Passive: 30 V DC / 250 mA
 - Open collector
 - Can be configured as:
 - Pulse output
 - Pulse value and pulse polarity can be selected, max. pulse width adjustable (5 to 2000 ms), pulse frequency max. 100 Hz
 - Status output
 - For example, can be configured for error messages, empty pipe detection, flow recognition, limit value
-

Signal on alarm**Current output**

Failsafe mode can be selected (e.g. in accordance with NAMUR Recommendation NE 43)

Pulse output

Failsafe mode can be selected

Status output

"Not conductive" in the event of fault or power supply failure

Load

See "Output signal"

Low flow

Low flow cutoff, switch-on point can be selected as required

Galvanic isolation

All circuits for inputs, outputs and power supply are galvanically isolated from each other.

Power supply

Terminal assignment

Order information "Input / Output"	Terminal No.				
	24 (+)	25 (-)	26 (+)	27 (-)	1 (L1/L+) 2 (N/L-)
A	Pulse/status output		HART current output		Power supply
Functional values	See "Output signal"				See "Supply voltage"

Supply voltage

- 85 to 250 V AC, 45 to 65 Hz
- 20 to 28 V AC, 45 to 65 Hz, 11 to 40 V DC

Power consumption

Power consumption

- 85 to 250 V AC: < 12 VA (incl. sensor)
- 20 to 28 V AC: < 8 VA (incl. sensor)
- 11 to 40 V DC: < 6 W (incl. sensor)

Switch-on current

- Max. 16 A (< 5 ms) for 250 V AC
- Max. 5.5 A (< 5 ms) for 28 V AC
- Max. 3.3 A (< 5 ms) for 24 V DC

Power supply failure

Lasting min. ½ cycle frequency: EEPROM saves measuring system data

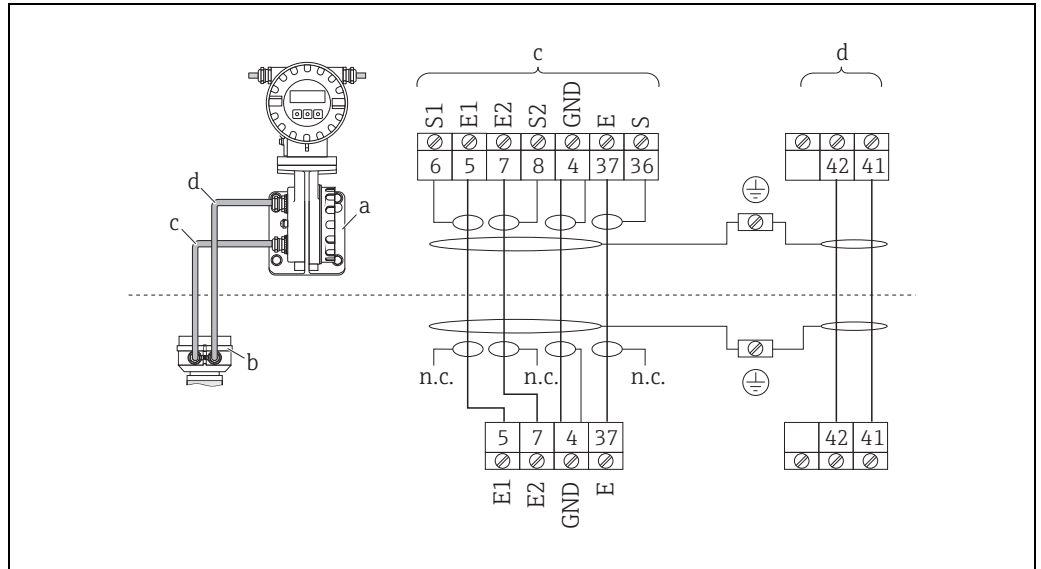

Electrical connection

Connecting the transmitter (aluminum field housing), cable cross-section max. 2.5 mm² (14 AWG)

- a Electronics compartment cover
- b Power supply cable
- c Ground terminal for power supply cable
- d Terminal connector for power supply cable
- e Electrode cable
- f Ground terminal for electrode cable
- g Terminal connector for electrode cable
- h Service connector for connecting service interface FXA 193 (Fieldcheck, FieldCare)
- i Ground terminal for potential equalization

Electrical connection, remote version

Connecting the remote version

- a Wall-mount housing connection compartment
- b Sensor connection housing cover
- c Electrode cable
- d Coil current cable
- n.c. Not connected, insulated cable shields

Cable colors/numbers for terminals:
 5/6 = brown; 7/8 = white; 4 = green; 37/36 = yellow

Potential equalization

Note!

The measuring system must be included in the potential equalization.

Perfect measurement is only ensured when the fluid and the sensor have the same electrical potential. This is ensured by the reference electrode integrated in the sensor as standard.

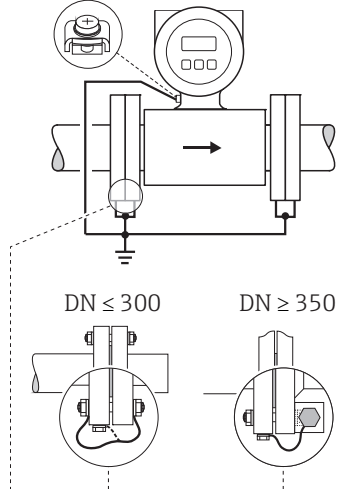

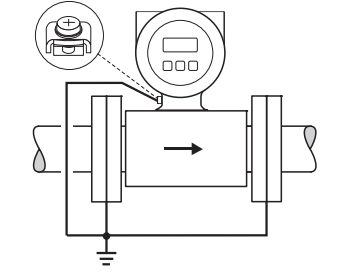

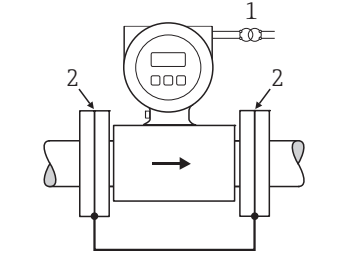

The following should also be taken into consideration for potential equalization:

- Internal grounding concepts in the company
- Operating conditions, such as the material/grounding of the pipes (see table)

Standard situation

Operating conditions	Potential equalization
<p>When using the measuring device in a:</p> <ul style="list-style-type: none"> ■ Metal, grounded pipe <p>Potential equalization takes place via the ground terminal of the transmitter.</p> <p> Note! When installing in metal pipes, we recommend you connect the ground terminal of the transmitter housing with the piping.</p>	<p style="text-align: center;"><i>Via the ground terminal of the transmitter</i></p> <p style="text-align: right;"><small>A0010831</small></p>

Special situations

Operating conditions	Potential equalization
<p>When using the measuring device in a:</p> <ul style="list-style-type: none"> ▪ Metal pipe that is not grounded <p>This connection method also applies in situations where:</p> <ul style="list-style-type: none"> ▪ Customary potential equalization cannot be ensured. ▪ Excessively high equalizing currents can be expected. <p>Both sensor flanges are connected to the pipe flange by means of a ground cable (copper wire, at least 6 mm² / 0.0093 in²) and grounded. Connect the transmitter or sensor connection housing, as applicable, to ground potential by means of the ground terminal provided for the purpose.</p> <p>Ground cable installation depends on the nominal diameter:</p> <ul style="list-style-type: none"> ▪ DN ≤ 300 (12"): The ground cable is mounted directly on the conductive flange coating with the flange screws. ▪ DN ≥ 350 (14"): The ground cable is mounted directly on the metal transport bracket. <p> Note! When installing the ground disks, please comply with the enclosed Installation Instructions.</p>	 <p style="text-align: right;">A0010833</p> <p><i>Via the ground terminal of the transmitter and the optionally available ground disks</i></p>
<p>When using the measuring device in a:</p> <ul style="list-style-type: none"> ▪ Pipe with a cathodic protection unit <p>The device is installed potential-free in the pipe. Only the two flanges of the pipe are connected with a ground cable (copper wire, at least 6 mm² / 0.0093 in²). Here, the ground cable is mounted directly on the conductive flange coating with flange screws.</p> <p>Note the following when installing:</p> <ul style="list-style-type: none"> ▪ The applicable regulations regarding potential-free installation must be observed. ▪ There should be no electrically conductive connection between the pipe and the device. ▪ The mounting material must withstand the applicable torques. 	 <p style="text-align: right;">A0010834</p> <p><i>Potential equalization and cathodic protection</i></p> <p>1 Power supply isolation transformer 2 Electrically isolated</p>

Cable entry

Power supply and electrode cables (inputs/outputs):

- Cable entry M20 × 1.5 (8 to 12 mm / 0.31 to 0.47")
- Thread for cable entries, ½" NPT, G ½"

Connecting cable for remote version:

- Cable entry M20 × 1.5 (8 to 12 mm / 0.31 to 0.47")
- Thread for cable entries, ½" NPT, G ½"

Remote version cable specifications

Coil current cable

- $3 \times 0.75 \text{ mm}^2$ (18 AWG) PVC cable with common, braided copper shield ($\varnothing \sim 9 \text{ mm} / 0.35''$)
- Conductor resistance: $\leq 37 \text{ } \Omega/\text{km}$ ($\leq 0.011 \text{ } \Omega/\text{ft}$)
- Capacitance core/core, shield grounded: $\leq 120 \text{ pF/m}$ ($\leq 37 \text{ pF/ft}$)
- Operating temperature: -20 to $+80 \text{ }^\circ\text{C}$ (-4 to $+176 \text{ }^\circ\text{F}$)
- Cable cross-section: max. 2.5 mm^2 (16 AWG)
- Test voltage for cable insulation: $\geq 1433 \text{ V AC r.m.s. 50/60 Hz}$ or $\geq 2026 \text{ V DC}$

Electrode cable

- $3 \times 0.38 \text{ mm}^2$ (20 AWG) PVC cable with common, braided copper shield ($\varnothing \sim 9.5 \text{ mm} / 0.37''$) and individual shielded cores
- Conductor resistance: $\leq 50 \text{ } \Omega/\text{km}$ ($\leq 0.015 \text{ } \Omega/\text{ft}$)
- Capacitance core/shield: $\leq 420 \text{ pF/m}$ ($\leq 128 \text{ pF/ft}$)
- Operating temperature: -20 to $+80 \text{ }^\circ\text{C}$ (-4 to $+176 \text{ }^\circ\text{F}$)
- Cable cross-section: max. 2.5 mm^2 (16 AWG)

 7 Outer jacket

Operation in zones of severe electrical interference

The measuring device complies with the general safety requirements in accordance with EN 61010-1, the EMC requirements of IEC/EN 61326 and NAMUR Recommendation NE 21.

Note!

Grounding is by means of the ground terminals provided for the purpose inside the connection housing.

Ensure that the stripped and twisted lengths of cable shield to the ground terminal are as short as possible.

Performance characteristics

Reference operating conditions

As per DIN EN 29104 and VDI/VDE 2641:

- Fluid temperature: $+28\text{ °C} \pm 2\text{ K}$ ($+82\text{ °F} \pm 2\text{ K}$)
- Ambient temperature: $+22\text{ °C} \pm 2\text{ K}$ ($+72\text{ °F} \pm 2\text{ K}$)
- Warm-up period: 30 minutes

Installation conditions:

- Inlet run $> 10 \times \text{DN}$
- Outlet run $> 5 \times \text{DN}$
- Sensor and transmitter grounded.
- The sensor is centered in the pipe.

Maximum measured error

- Current output: also typically $\pm 5\ \mu\text{A}$
- Pulse output: $\pm 0.5\%$ o.r. $\pm 2\text{ mm/s}$ ($\pm 0.5\%$ o.r. $\pm 0.08\text{ in/s}$) (o.r. = of reading)

Fluctuations in the supply voltage do not have any effect within the specified range.

Max. measured error in % of reading

Repeatability

Max. $\pm 0.2\%$ o.r. $\pm 2\text{ mm/s}$ ($\pm 0.2\%$ o.r. $\pm 0.08\text{ in/s}$) (o.r. = of reading)

Installations

Mounting location

Entrained air or gas bubble formation in the measuring tube can result in an increase in measuring errors.

Avoid the following installation locations in the pipe:

- Highest point of a pipeline. Risk of air accumulating!
- Directly upstream from a free pipe outlet in a vertical pipeline.

A0003202

Mounting location

A0003017

Installation of the sensor after a control valve is not recommended

1 Control valve

Installation of pumps

Sensors may not be installed on the pump suction side. This precaution is to avoid low pressure and the consequent risk of damage to the lining of the measuring tube. Information on the pressure tightness of the measuring tube lining → 21, Section "Pressure tightness".

Pulsation dampers may be needed when using piston pumps, piston diaphragm pumps or hose pumps. Information on the shock and vibration resistance of the measuring system → 17, Section "Shock and vibration resistance".

A0003203

Installation of pumps

Partially filled pipes

Partially filled pipes with gradients necessitate a drain-type configuration.

The empty pipe detection function (EPD) provides additional security in detecting empty or partially filled pipes.

Note!

Risk of solids accumulating. Do not install the sensor at the lowest point in the drain. It is advisable to install a cleaning valve.

Installation with partially filled pipes

Down pipes

Install a siphon or a vent valve downstream of the sensor in down pipes $h \geq 5$ m (16.4 ft). This precaution is to avoid low pressure and the consequent risk of damage to the lining of the measuring tube. This measure also prevents the liquid current stopping in the pipe which could cause air locks. Information on the pressure tightness of the measuring tube lining → 21, Section "Pressure tightness".

Installation measures for vertical pipes

- 1 Vent valve
- 2 Pipe siphon
- h Length of the down pipe

Orientation

An optimum orientation helps avoid gas and air accumulations and deposits in the measuring tube. However, the measuring device also offers the additional function of empty pipe detection (EPD) for detecting partially filled measuring tubes or if outgassing fluids or fluctuating operating pressures are present.

Vertical orientation

This is the ideal orientation for self-emptying piping systems and for use in conjunction with empty pipe detection.

Vertical orientation

Horizontal orientation

The measuring electrode axis should be horizontal. This prevents brief insulation of the two measuring electrodes by entrained air bubbles.

Note!

Empty pipe detection only works correctly with horizontal orientation if the transmitter housing is facing upwards. Otherwise there is no guarantee that empty pipe detection will respond if the measuring tube is only partially filled or empty.

A0003207

Horizontal orientation

- 1 EPD electrode for empty pipe detection
- 2 Measuring electrodes for signal detection
- 3 Reference electrode for potential equalization

Inlet and outlet run

If possible, install the sensor well clear of assemblies such as valves, T-pieces, elbows etc.

Note the following inlet and outlet runs to comply with measuring accuracy specifications:

- Inlet run: $\geq 5 \times \text{DN}$
- Outlet run: $\geq 2 \times \text{DN}$

A0003210

Inlet and outlet run standard version

A0032859

Optional version: w/o inlet and outlet run

Adapters

Suitable adapters to DIN EN 545 (double-flange reducers) can be used to install the sensor in larger-diameter pipes. The resultant increase in the rate of flow improves measuring accuracy with very slow-moving fluids. The nomogram shown here can be used to calculate the pressure loss caused by reducers and expanders.

Note!

The nomogram only applies to liquids of viscosity similar to water.

1. Calculate the ratio of the diameters d/D .
2. From the nomogram read off the pressure loss as a function of flow velocity (downstream from the reduction) and the d/D ratio.

A0003213

Pressure loss due to adapters

Length of connecting cable

When mounting the remote version, please note the following to achieve correct measuring results:

- Fix cable run or lay in armored conduit. Cable movements can falsify the measuring signal especially in the case of low fluid conductivities.
- Route the cable well clear of electrical machines and switching elements.
- If necessary, ensure potential equalization between sensor and transmitter.
- The permitted cable length L_{max} is determined by the fluid conductivity. A minimum conductivity of $50 \mu\text{S/cm}$ is needed for all fluids.
- When the empty pipe detection function is switched on (EPD), the maximum connecting cable length is 10 m (33 ft).

A0003214

Permitted length of connecting cable for remote version

Area marked in gray = permitted range; L_{max} = length of connecting cable in [m] ([ft]); fluid conductivity in [$\mu\text{S/cm}$]

Environment

Ambient temperature range	<p>Transmitter</p> <ul style="list-style-type: none"> ▪ -20 to +60 °C (-4 to +140 °F) <p>Sensor</p> <ul style="list-style-type: none"> ▪ Flange material carbon steel: -10 to +60 °C (+14 to +140 °F) ▪ Flange material stainless steel: -40 to +60 °C (-40 to +140 °F) <p> Note! The permitted temperature range of the measuring tube lining may not be undershot or overshoot (→ 18, Section "Medium temperature range").</p> <p>Please note the following points:</p> <ul style="list-style-type: none"> ▪ Install the device in a shady location. Avoid direct sunlight, particularly in warm climatic regions. ▪ The transmitter must be mounted separate from the sensor if both the ambient and fluid temperatures are high.
Storage temperature	<p>The storage temperature corresponds to the operating temperature range of the measuring transmitter and the appropriate measuring sensors.</p> <p> Note!</p> <ul style="list-style-type: none"> ▪ The measuring device must be protected against direct sunlight during storage in order to avoid unacceptably high surface temperatures. ▪ A storage location must be selected where moisture does not collect in the measuring device. This will help prevent fungus and bacteria infestation which can damage the liner.
Degree of protection	<ul style="list-style-type: none"> ▪ Standard: IP 67 (NEMA 4X) for transmitter and sensor. ▪ Optional: IP 68 (NEMA 6P) for sensor for remote version. ▪ For information regarding applications where the device is buried directly in the soil or is installed in a flooded wastewater basin please contact your local Endress+Hauser Sales Center.
Shock and vibration resistance	Acceleration up to 2 g following IEC 600 68-2-6
Electromagnetic compatibility (EMC)	<ul style="list-style-type: none"> ▪ As per IEC/EN 61326 as well as NAMUR Recommendation NE 21 ▪ Emission: to limit value for industry EN 55011

Process

Medium temperature range

The permitted temperature depends on the measuring tube lining:

- Polyurethane: -20 to +50 °C (-4 to +122 °F) (DN 25 to 1200 / 1 to 48")
- Hard rubber: 0 to +80 °C (+32 to +176 °F) (DN 50 to 2000 / 2 to 78")

Conductivity

The minimum conductivity is: $\geq 50 \mu\text{S/cm}$

Note!

In the remote version, the necessary minimum conductivity also depends on the cable length
(→ 16, Section "Length of connecting cable").

Pressure-temperature ratings

Caution!

The following diagrams contain material load diagrams (reference curves) for flange materials with regard to the medium temperature. However, the maximum medium temperatures permitted always depend on the lining material of the sensor and/or the sealing material.

		[mbar]	[psi]	[mbar]	[psi]
25 to 1200	1 to 48"	0	0	0	0

Measuring tube lining: Hard rubber

Nominal diameter		Limit values for abs. pressure [mbar] ([psi]) at fluid temperatures:					
[mm]	[inch]	25 °C (77 °F)		70 °C (158 °F)		80 °C (176 °F)	
		[mbar]	[psi]	[mbar]	[psi]	[mbar]	[psi]
50 to 2000	2 to 78"	0	0	0	0	0	0

Limiting flow

The diameter of the pipe and the flow rate determine the nominal diameter of the sensor. The optimum flow velocity is between 2 to 3 m/s (6.5 to 9.8 ft/s).

The velocity of flow (v), moreover, has to be matched to the physical properties of the fluid:

- $v < 2$ m/s (6.5 ft/s): for abrasive fluids such as potter's clay, lime milk, ore slurry etc.
- $v > 2$ m/s (6.5 ft/s): for fluids causing build-up such as wastewater sludges etc.

Note!

- A necessary increase in the flow velocity can be achieved by reducing the sensor nominal diameter (→ 16, Section "Adapters").
- For fluids with high levels of solids, the selection of a pipe with nominal diameter $> DN 8$ ($\frac{3}{8}$ ") may be considered, to improve the stability of the signal and cleanability due to larger electrodes.

Pressure loss

- No pressure loss if the sensor is installed in a pipe with the same nominal diameter.
- Pressure losses for configurations incorporating adapters according to DIN EN 545 (→ 16, Section "Adapters").

Pressure loss DN 50 to 80 (2 to 3") for optional version w/o inlet and outlet runs

A0032667-DE

Pressure loss DN 100 to 300 (4 to 12") for optional version w/o inlet and outlet runs

A0032668-DE

Vibrations

Secure the piping and the sensor if vibration is severe.

Note!

If vibrations are too severe, we recommend the sensor and transmitter be mounted separately. Information on the permitted shock and vibration resistance → 17, Section "Shock and vibration resistance".

Operability

Local operation	<p>Display elements</p> <ul style="list-style-type: none"> ■ Liquid crystal display: unilluminated, two-line, 16 characters per line
------------------------	--

- Display (operating mode) preconfigured: volume flow and totalizer status
- 1 totalizer

Operating elements

Local operation via three keys (S, O, F)

Remote operation Operation via HART protocol and FieldCare

Certificates and approvals

CE mark The measuring system is in conformity with the statutory requirements of the EC Directives. Endress+Hauser confirms successful testing of the device by affixing to it the CE mark.

C-tick mark The measuring system meets the EMC requirements of the "Australian Communications and Media Authority (ACMA)".

Ex approval Information about currently available Ex versions (FM, CSA etc.) can be supplied by your Endress+Hauser Sales Center on request. All explosion protection data are given in a separate documentation which is available upon request.

Other standards and guidelines

- EN 60529
Degrees of protection by housing (IP code).
- EN 61010
Protection Measures for Electrical Equipment for Measurement, Control, Regulation and Laboratory Procedures.
- IEC/EN 61326
"Emission in accordance with requirements for Class A". Electromagnetic compatibility (EMC requirements).
- ANSI/ISA-S82.01
Safety Standard for Electrical and Electronic Test, Measuring, Controlling and related Equipment - General Requirements. Pollution degree 2, Installation Category II.
- CAN/CSA-C22.2 No. 1010.1-92
Safety requirements for Electrical Equipment for Measurement and Control and Laboratory Use. Pollution degree 2, Installation Category II.

Pressure equipment directive The measuring devices can be ordered with or without PED (Pressure Equipment Directive). If a device with PED is required, this must be ordered explicitly. This is not possible or required for devices with nominal diameters of DN 25 (1") or smaller.

- With the identification PED/G1/III on the sensor nameplate, Endress+Hauser confirms conformity with the "Basic safety requirements" of Appendix I of the Pressure Equipment Directive 2014/68/EU.
- Devices with this identification (with PED) are suitable for the following types of fluid:
 - Fluids of Group 1 and 2 with a steam pressure of greater than, or smaller and equal to 0.5 bar (7.3 psi)
 - Unstable gases
- Devices without this identification (without PED) are designed and manufactured according to good engineering practice. They correspond to the requirements of Art.4, Section 3 of the Pressure Equipment Directive 2014/68/EU. Their application is illustrated in Diagrams 6 to 9 in Appendix II of the Pressure Equipment Directive 2014/68/EU.

Ordering information

Detailed ordering information is available from the following sources:

- In the Product Configurator on the Endress+Hauser website: www.endress.com → Select country → Instruments → Select device → Product page function: Configure this product
- From your Endress+Hauser Sales Center: www.endress.com/worldwide

Product Configurator - the tool for individual product configuration:

- Up-to-the-minute configuration data

- Depending on the device: Direct input of measuring point-specific information such as measuring range or operating language
- Automatic verification of exclusion criteria
- Automatic creation of the order code and its breakdown in PDF or Excel output format
- Ability to order directly in the Endress+Hauser Online Shop

Accessories

Various accessories, which can be ordered separately from Endress+Hauser, are available for the transmitter and the sensor. Your Endress+Hauser service organization can provide detailed information on the order codes in question.

Device-specific accessories

For the transmitter

Accessory	Description
Proline Promag 10 transmitter	Transmitter for replacement or storage. Use the order code to define the following specifications: <ul style="list-style-type: none"> ▪ Approvals ▪ Degree of protection/version ▪ Cable for remote version ▪ Cable entry ▪ Display/power supply/operation ▪ Software ▪ Outputs/inputs
Mounting set for Promag 10 transmitter	Mounting set for aluminum field housing (remote version). Suitable for Pipe mounting
Cable for remote version	Coil and electrode cables, various lengths.
Process display RIA45	Multifunctional 1-channel display unit: <ul style="list-style-type: none"> ▪ Universal input ▪ Transmitter power supply ▪ Limit relay ▪ Analog output
Process display RIA251	Digital display device for looping into the 4 to 20 mA current loop.
Field display unit RIA16	Digital field display device for looping into the 4 to 20 mA current loop.
Application Manager RMM621	Electronic recording, display, balancing, control, saving and event and alarm monitoring of analog and digital input signals. Values and conditions determined are output by means of analog and digital output signals. Remote transmission of alarms, input values and calculated values using a PSTN or GSM modem.

For the sensor

Accessory	Description
Wall-mounting kit for Promag H	Wall-mounting kit for the Promag H sensor.
Mounting kit for Promag D as wafer version	<ul style="list-style-type: none"> ▪ Mounting bolts ▪ Nuts incl. washers ▪ Flange seals ▪ Centering sleeves (if required for the flange)
Set of seals for Promag D as wafer version	Set of seals consisting of two flange seals.
Mounting kit for Promag H	<ul style="list-style-type: none"> ▪ 2 process connections ▪ Threaded fasteners ▪ Seals
Set of seals for Promag H	For regular replacement of the seals of the Promag H sensor.
Welding jig for Promag H	Weld nipple as process connection: welding jig for installation in pipe.

Accessory	Description
Adapter connection for Promag A/H	Adapter connections for installing a Promag H instead of a Promag 30/33A or Promag 30/33H DN 25.
Ground cable for Promag E/L/P/W	Ground cable for potential equalization.
Ground disk for Promag E/L/P/W	Ground disk for potential equalization.

Communication-specific accessories

Accessory	Description
HART Communicator Field Xpert SFX 100	Handheld terminal for remote configuration and for obtaining measured values via the HART current output (4 to 20 mA). Contact your Endress+Hauser representative for more information.
Fieldgate FXA320	Gateway for remote interrogation of HART sensors and actuators via Web browser: <ul style="list-style-type: none"> ▪ 2-channel analog input (4 to 20 mA) ▪ 4 binary inputs with event counter function and frequency measurement ▪ Communication via modem, Ethernet or GSM ▪ Visualization via Internet/Intranet in Web browser and/or WAP cellular phone ▪ Limit value monitoring with alarm by e-mail or SMS ▪ Synchronized time stamping of all measured values.
Fieldgate FXA520	Gateway for remote interrogation of HART sensors and actuators via Web browser: <ul style="list-style-type: none"> ▪ Web server for remote monitoring of up to 30 measuring points ▪ Intrinsically safe version [EEx ia]IIC for applications in hazardous areas ▪ Communication via modem, Ethernet or GSM ▪ Visualization via Internet/Intranet in Web browser and/or WAP cellular phone ▪ Limit value monitoring with alarm by e-mail or SMS ▪ Synchronized time stamping of all measured values ▪ Remote diagnosis and remote configuration of connected HART devices
FXA195	The Commubox FXA195 connects intrinsically safe Smart transmitters with HART protocol to the USB port of a personal computer. This makes the remote operation of the transmitters possible with the aid of configuration programs (e.g. FieldCare). Power is supplied to the Commubox by means of the USB port

Service-specific accessories

Accessory	Description
Applicator	Software for selecting and planning flowmeters. The Applicator software can be downloaded from the Internet or ordered on CD-ROM for installation on a local PC. Contact your Endress+Hauser representative for more information.
Fieldcheck	Tester/simulator for testing flowmeters in the field. When used in conjunction with the "FieldCare" software package, test results can be imported into a database, printed out and used for official certification. Contact your Endress+Hauser representative for more information.
FieldCare	FieldCare is Endress+Hauser's FDT-based asset management tool. It can configure all intelligent field units in your system and helps you manage them. By using status information, it is also a simple but effective way of checking their status and condition.

Accessory	Description
Memograph M graphic display recorder	The Memograph M graphic display recorder provides information on all the relevant process variables. Measured values are recorded correctly, limit values are monitored and measuring points analyzed. The data are stored in the 256 MB internal memory and also on a DSD card or USB stick. Memograph M boasts a modular design, intuitive operation and a comprehensive security concept. The ReadWin® 2000 PC software is part of the standard package and is used for configuring, visualizing and archiving the data captured. The mathematics channels which are optionally available enable continuous monitoring of specific power consumption, boiler efficiency and other parameters which are important for efficient energy management.
FXA193	Service interface from the device to the PC for operation via FieldCare.
